Security Clearance: **Level II (Secret)**

EDUCATION

Bachelor of Computer Science (Honours)

Expected May 2028

Cybersecurity Stream, Co-op — Minor in Mathematics

- Carleton University, Ottawa, ON
- Relevant Coursework: Data Structures & Algorithms, Database Systems, Systems Programming, Computer Networks, Functional Programming

WORK EXPERIENCE

Virtualization & Infrastructure Engineering Co-op

April 2026 – Present

Department of National Defence (DGITI)

Ottawa, ON

- Supporting enterprise virtualization engineering across VMware ESXi, vCenter, and Horizon environments managing clustered server infrastructure for DND operations
- Assisting with change management workflows and incident investigation using Splunk to track service modifications and access activity across classified and unclassified lab environments
- Contributing to technical documentation including reference architectures, build procedures, and system specifications to support fourth-line infrastructure engineering pipelines
- Working with Python automation scripts to support lab provisioning and virtualization tasks across Virtual Desktop, Enterprise Services, and AI/ML Architecture teams

Security Operations

Jul 2024 – Present

Commissionaires, Parliament Hill Centre Block Rehabilitation Project

Ottawa, ON

- Managed access control for 500+ government staff by implementing verification procedures that maintained a consistently accurate security database across all audits
- Processed 200+ daily access requests and introduced validation checks that reduced data entry errors and stabilized high volume workflows
- Reviewed access logs for anomalies and collaborated with PPS and PSPC IT teams on trend analysis that led to faster and more reliable incident response

PROJECTS

Cloud Security Misconfiguration Scanner — Python, AWS, IAM, S3

Jan 2026

- Developed a Python-based scanner to identify common AWS misconfigurations across IAM policies, S3 buckets, and security groups
- Flagged public resource exposure and overly permissive access to support remediation and improve cloud security posture

Network Traffic Analytics Lab | VirtualBox, Wireshark, Python, Splunk

Nov 2025

- Simulated network traffic in a virtual environment using Wireshark and developed Python scripts to detect anomalies including brute force attempts and suspicious SMTP activity
- Ingested traffic logs into Splunk to build a monitoring dashboard visualizing high-volume anomalies and streamline threat identification

Vulnerability Assessment Lab | VirtualBox, Nessus, OpenVAS, Linux

Mar 2025

- Deployed vulnerable Linux systems to practice vulnerability assessment, identifying critical issues including remote root access
- Applied system hardening techniques by disabling insecure services and implementing access controls, reducing vulnerability scores from critical to low risk

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, C++, JavaScript

Infrastructure & Virtualization: VMware ESXi, vCenter, Horizon, VirtualBox

Security Tools: Wireshark, Nessus, Splunk, Kali, Linux

Languages: English/French (Bilingual), Arabic (Fluent)
